Diluted ▶ 1076 sq. ft. (+100 m²)

Coverage rates are indicative and per coat.

Packaging:

1 Liter (1.06 QT) 12 plastic bottles per box

WHAT IT'S FOR

- Protects unpolished natural stone, quarry tile and terracotta.
- Gives the surface a satin finish.
- Perfect for surface treatment maintenance.
- Enhances the most prestigious floor surface materials.

ADVANTAGES

- 3-in-1 solution: protects, maintains and gives the surface a satin finish.
- Self-polishing, yet can be manually polished for a shinier finish.
- Easy to apply following simple instructions.
- High coverage rates.

HOW TO USE IT

Can be used diluted or undiluted, according to use.

To protect unpolished natural stone and quarry tile: Apply the product with a cloth or lambswool applicator. Wait until completely dry, then apply a second coat perpendicular to the first. An initial protective coat of **FOB** penetrating sealer is recommended on highly absorbent stone (such as pietra serena). **SATIN** can also be used on terracotta floors subject to heavy traffic as a final coat.

For maintenance: To restore the floor's surface shine, dilute the product 1:10 (two capfuls per gallon of water).

Surfaces treated with **SATIN** can be buffed with a floor polishing machine for a shinier finish.

Caution: Product application is not recommended on outdoor surfaces, in wet environments and any place with standing water.

FILA. Because It Works.
